

# Latisse

**1 kit: \$120**

**If you buy 2 kits: \$210**

**\*Longer Lashes in 10 weeks from today.**

**25% Longer**

**106% Thicker**

\*Each individual 3ml bottle contains 80-100 drops (lasting 5-7 weeks). Each kit comes with 60 wands to apply the solution.

Use Latisse up to 16 weeks for optimal results.

## **How does LATISSE® work?**

LATISSE® is believed to affect the growth phase of the eyelash hair cycle in two ways: first, it increases the length of this phase; and second, it increases the number of hairs in this growth phase. The exact way it works is unknown.

## **How do I apply Latisse®?**

LATISSE® solution is a once-a-day treatment you apply yourself each evening to the base of the upper eyelashes.

## **How soon will I see results?**

LATISSE® users may see results starting at 8 weeks with full results at 12 to 16 weeks. The growth is gradual overnight, over time.

## **What is I forget to apply one night? Or a few nights?**

If you miss an application or a few, don't try to catch up. Just apply the LATISSE® treatment the next evening and stay on schedule.

## **What are the possible side effects of Latisse®?**

The most common side effects after using LATISSE® solution are an itching sensation in the eyes and/or eye redness. This was reported in approximately 4% of patients.

LATISSE® solution may cause other less common side effects which typically occur on the skin close to where LATISSE® is applied, or in the eyes. These include skin darkening, eye irritation, dryness of the eyes, and redness of the eyelids.

## **Could Latisse® cause the color of my eyes to change?**

Increased brown iris pigmentation has occurred when similar medications were instilled directly into the eye to treat elevated intraocular pressure/glaucoma. Although iris pigmentation was not reported in clinical studies with LATISSE®, patients should be advised about the potential for increased brown iris pigmentation which is likely to be permanent.
